Diesel Particulate Filters for PM Control from Marine Engines

September 7, 2016
Vancouver, BC
Canada
MECA Portfolio Covers Criteria and GHG Emission Control Technologies

- Fuel Combustion Controls
- Air Handling
- Exhaust System Integration
- Filters & Substrates
- Evaporative Controls
- Powertrain Electrification
- OBD Sensors
- Waste Heat Recovery
Clean Diesel Technology Driven By a Decade of U.S. EPA Mobile Source Emission Regulations

Average Benefit:Cost = 20:1

Tier 2 Light-Duty
final rule 1999
fully phased in 2009
Diesels held to same standards as gasoline vehicles
Diesel sulfur now 15 ppm

Ocean-going Vessels
final rule 2009; IMO ECA in 2010
ECA: 1000 ppm Sulfur by 2015;
80% lower NOx by 2016

Heavy-Duty Highway
final rule 2000
Sulfur now 15 ppm
fully phased in 2007-2010

Locomotive / Marine Tier 4
final rule 2008
Sulfur now 15 ppm
fully phased in 2017

Nonroad Diesel Tier 4
final rule 2004
Sulfur now 15 ppm
fully phased in 2015
U.S. EPA Tier 4 Emission Standards in Place for Commercial Marine Engines

Tier 4 Standards for Commercial Marine Diesel C1 and C2 (g/bhp-hr)

<sup>a</sup> This standard is 0.19 for engines with 15-30 L/cylinder displacement.
<sup>b</sup> Optional compliance start dates are included within these model years.
<sup>c</sup> Option for C2 engines: Tier 3 PM/NOx+HC at 0.10/5.8 in 2012 and Tier 4 in 2015.
<sup>d</sup> Tier 3 PM standards continue to apply for these engines in 2014 and 2015.

Category 1: < 7 liters/cyl.;
Category 2: 7-30 liters/cyl.

15 ppm Marine Diesel Fuel Sulfur Limit Began in June 2012
## Stage V EU Off-Road Standards

### Stage V Emission Standards for Inland Waterway Vessels

- PN standards for inland waterway vessel propulsion engines > 300 kW and aux engines > 560 kW
- Stage V will result in DPF use

Source: www.dieselnet.com
Diesel Particulate Filters (DPFs)

- Wall flow ceramic filter element with high capture efficiency for particulates over a broad size range (cordierite or SiC filter elements)
- Captured soot needs to be burned off (regenerated) at regular intervals to manage backpressure on engine (passive and active regen. options)
- Commercialized on light-duty diesels in Europe in 2000, on US LDD starting in 2006; standard on US 2007+ trucks/buses, on 2013+ Euro VI trucks/buses – 10s of millions in-use worldwide
- Capture soot and inorganic-based particles associated with engine wear, lubricant consumption: regular maintenance required (filter cleaning)
DPFs Have High BC/PN Filtration Efficiency: Heavy-duty Diesel Engine Example

- ETC tailpipe emissions $\sim 4 \times 10^{11}/\text{kWh}$
- DPF Efficiency $> 99.9\%$

- WHTC tailpipe emissions $< 5 \times 10^{11}/\text{kWh}$
- DPF Efficiency $> 99.8\%$

DPFs Capture Ultrafine Diesel Particulates
Clean Diesel Technology Expanding into U.S. Off-road Applications

Tier 4 Machines with DPFs

Locomotives with DPFs and/or SCR systems

Marine DPFs and/or SCR systems
Marine DPF Experience Includes Filters with Passive & Active Regeneration; Little Experience with OGVs

Experience/Issues
- LSD/ULSD provides best PM performance
- Installations designed for marine environment (stainless steel housings exclude water intrusion, insulated, creative packaging in a limited space)
- Filter also provides sound attenuation
- Engine backpressure issues need to be addressed (filter design, bypass loop, monitor)
- Filter maintenance friendly installations

Applications
- Numerous large yachts: mostly auxiliary engines, some propulsion engines (100 – 1500 hp)
- Limited applications on harborcraft (tugs, ferries, pilot boats) & inland vessels (barges, ferries, excursion boats)
- DPF demonstration on OGV medium speed, auxiliary engine: relatively poor PM performance due to use of high sulfur fuel/high ash lube (700 ppm S fuel, PM dominated by organic carbon)
- Few reports of OGV filter demos (Mitsui OSK Lines 2010 coastal ferry trial/2012 OGV trial, Queen Victoria 2014)
Passive DPF Locomotive Retrofit Completed in California

- Tier 2 locomotive powered by three 19 liter, 522 kW Cummins gen-sets each retrofit with a DOC+catalyzed DPF (passive regeneration)

- Operated 3000 hours in switcher rail service with ULSD

- PM levels reduced by ca. 80% (19 mg/bhp-hr PM measured after 3000 h of service; below EPA Tier 4 PM limit of 30 mg/bhp-hr); HCs: 90%, CO: 99% reduced vs. baseline

- Report available at: http://www.arb.ca.gov/msprog/aqip/demo.htm
Tug Active DPF+SCR Retrofit at Port of LA

- Powered by two Detroit Diesel 525 hp, 14 liter, 2-stroke turbocharged & supercharged engines rebuilt to EPA Tier 2 emission levels
- Each engine retrofit with catalyzed DPF+SCR system; DPF regeneration managed by in-line diesel fuel burner
- With ULSD PM reduced by > 95% (ca. 5-7 mg/ kWh after ca. 200 h service) NOx reduced by > 90%
- Report available at: http://www.arb.ca.gov/msprog/aqip/demo.htm
HFO DPF Challenge & Solution

Challenge
• Sulfur content in fuel up to 3.5% and no NO₂
• Ash content in HFO up to 0.2%
• Filter pressure drop max 25–60 mBar

Solution
• SiC filter substrate coated with Pd/V₂O₅
• Passive soot combustion
• HC (PAH) conversion and CO conversion
• Ash removed by reverse pulse flow
• Sulfur-tolerant with low SO₂ oxidation
Particulate Removal Process with Passively Regenerated Catalyzed DPF

Queen Victoria Cruise Ship Soot Removal Summary

Soot removal: 80 – 92%

\[ \Delta p_{\text{max}} = 40 \text{ mBar} \]

MECA
US 2010 Technologies Deliver Surplus Health Benefits

- 2010 on-highway emission controls employing Cu and Fe based SCR catalysts have evolved into 2nd generation technologies.
- U.S. ACES study shows that 2010 commercial emission control technology significantly exceeds the standards, esp. on PM.
- > 3 million DPF equipped trucks & buses operating on U.S. highways
Availability of ULSD Enables Variety of CARB/EPA Verified Diesel Retrofit Technologies

- On-Road & Off-Road DPFs with Active Soot Regeneration
- On-Road & Off-Road DPFs with Passive Soot Regeneration
- Retrofit DPFs for Stationary Diesel Engines
- SCR Retrofits for On-Road & Off-Road Engines
- U.S. EPA (epa.gov/cleandiesel/verification/verif-list.htm)
- California ARB (www.arb.ca.gov/diesel/verdev/vt/cvt.htm)
