Standards for Vehicles In Circulation

Allen Lyons
April 2015
Mexico City
Smog Check Program Overview

- Program administered by Bureau of Automotive Repair (BAR)
- Designed in Consultation with ARB
- De-centralized program design
  - Privately owned stations licensed by BAR
- Historically: Most vehicles tested by OBD and ASM
- March 2015: OBD only testing for 2000 and newer gasoline vehicles
# Testing Requirements per Area

<table>
<thead>
<tr>
<th>Program Area</th>
<th>Smog Check Required</th>
<th>Testing Required</th>
</tr>
</thead>
</table>

OBD = On-Board Diagnostic System Focused Inspection  
ASM = Acceleration Simulation Mode Test  
TSI = Two Speed Idle Test
## Smog Check Requirements by Vehicle Type

<table>
<thead>
<tr>
<th>Fuel Type</th>
<th>Model-Year</th>
<th>Biennial Inspection (every other year)</th>
<th>Change-Of-Ownership Inspection</th>
<th>No Inspection Required</th>

</tbody>
</table>

(1) Gasoline includes alternative fueled vehicles, e.g., ethanol, methanol, LPG, CNG, etc.

(2) Hybrid vehicles are powered by both internal combustion and electric power sources.

(3) Diesel-powered vehicles with a GVWR greater than 14,000 lbs. are exempt from the Smog Check Program.

(4) Exception: Some model-year 2000 and newer vehicles will require a tailpipe test on the BAR-97 EIS. These include vehicles without OBDII systems, e.g., over 14,000 GVWR, and may also include vehicles with problematic OBDII systems.

(5) ASM required for vehicles registered in Enhanced program areas, unless vehicle is incompatible with dynamometer test, then TSI shall be performed. TSI required in Basic and Change of Ownership Program areas.

(6) The EGR functional inspection is only performed in conjunction with a TSI tailpipe test.
BAR 97 System

ASM Testing (with dyno)
TSI Testing
Basic OBD system testing
Systems are Certified by BAR
OBD Inspection System (OIS)

- Provides in-depth OBD focused testing
- Vendors certify systems through BAR

Data Acquisition Devices

OIS System Packages
California Smog Check Statistics

- 22 Million vehicles in program
  - 11.3 Million “initial” inspections/year
- 7,000 Smog Check Stations
- 21,000 Inspectors/Technicians
- Overall Failure rate (2014): 12.14%
- Average Inspection Cost (2014): $47
- Average Repair Cost (2014): $297
Smog Check Station Requirements

• To become a licensed Smog Check station, the facility must:
  o Be registered with BAR as an Automotive Repair Dealer (ARD)
  o Meet minimum equipment and facility requirements
  o Employ licensed inspectors
  o Retain service and repair records for three years
Smog Check Inspector Requirements

To become a licensed Smog Check inspector, the candidate must:

- Meet minimum experience requirements
- Meet minimum training requirements
- Pass a BAR licensing examination
STAR Stations

- Voluntary certification program began January 1, 2013
- Stations and inspectors must meet specified performance standards established by BAR
- Perform tests on directed vehicles and gross polluters
- Perform Repair Assistance services under BAR’s Consumer Assistance Program (CAP)
Portion of Failures Detected by OBD (CY2014)

Vehicle Model Year

The remainder of failing vehicles were identified another test element (e.g., tailpipe Testing, visual inspection)
Consumer Assistance Program (CAP)

• Provides low income motorists with up to $500 to fix failing vehicle
  o Testing and diagnosis costs paid by owner

• Also includes vehicle retirement option
  o $1,000 to $1,500 to have vehicle scrapped

• Money for the program comes through Smog Check and vehicle registration fees.
Roadside Inspections

• BAR conducts random roadside inspections throughout state
• Participation is voluntary / incentivized
• Vehicles are ASM/OBD tested
• Real world data
  o No pre-inspection repair bias
  o Used for program evaluation
Referee Network

- Contractor Run
- Unusual Configurations (Kit Cars, Engine Changes, etc.)
- Inspection Compatibility Issues
- Inspection Disputes
- Able to Bypass Normal Inspection Procedures
Setting Cutpoints

- Cutpoints generally designed to fail portion of worst performing vehicles in category
  - Model year groupings
  - Vehicle class groupings
- Typically established at “safe” levels and refined through program/test data
- BAR’s cutpoint lookup application
- BAR’s generic cutpoint table:
  - http://www.bar.ca.gov/pdf/ASM_Ave_Ph43.pdf
I/M Programs in U.S. States

www.obdclearinghouse.com
US State I/M Programs

• Every state except Colorado uses OBD as primary inspection method for 1996 and newer.
• Testing for 1995 and older vehicles vary by state
  o No testing
  o Visual inspections
  o TSI
  o ASM
  o Transient dyno tests
